Pull-in increased revenue, not wires

With the DSC self-contained wireless alarm system (PowerSeries 9045), installers are able to deliver a full-featured home security solution that installs in minutes and eliminates the clutter and expense of pulling wire to a host of sensor and detector accessories. Not only does this help installers move to the next installation quicker — helping to increase revenue — but it provides them with the flexibility needed during system placement. The wireless device enrollment process allows items such as smoke detectors, motion detectors and door/window contacts to be easily integrated.
